Controllers & Power Sources

Process Controller PEK

For use with ESAB CAN-controlled power sources and motors

- For use with ESAB automatic power sources LAF 631/ 1001/1251/1601, TAF 801/1251 and Aristo® 1000 AC/DC SAW.
- CAN-bus system for data transfer.
- Prepared for submerged arc welding (SAW), gas metal arc welding (GMAW) and arc gouging.
- User-friendly clear text menus.
- Selectable welding process.
- Memory for 255 parameter sets.
- Constant current or constant wire speed.
- Encoder controlled motors for top performance motion control.
- USB port for data back-up and transfer.
- Used welding parameters can be stored directly on a USB memory drive.
- Five Soft Keys can be configured according to operator preferences.

Ordering information

A2-A6 process controller PEK	0460 504 880
Sales Literature	XA00143720

All sales literature can be downloaded at assets.esab.com

Options & Accessories

I/O-Module	0462 080 001
Set of connectors	0462 119 880
Cable restraining bracket	0460 861 880
Control cable, 15 m (49 ft.)	0460 910 881
Control cable, 25 m (82 ft.)	0460 910 882
Control cable, 35 m (115 ft.)	0460 910 883
Control cable, 50 m (164 ft.)	0460 910 884

Adjustable sun shield for better visibility for outdoor use

Technical data

Connection voltage from the power source	42V AC, 50/60 Hz
Connection power	max 900 VA
Motor connection adjusted for ESAB's A2 and A6 motors	connection of 2 motors, motor current 6A cont., max 10A
Speed control	feedback from pulse encoder
Welding speed, m/min (ipm)	0.1-2.0 (4-79) depending on travel carriage
Max. manual travel speed, m/min (ipm)	2.0 (79)
Consumable wire feed speed, m/min (ipm)	0.3-25 (12-984) depending on wire feed unit
Valve output	1 pc, 42 V AC, 0.5A
Inputs	for connection of sensors or limit switches
Connection to power source	Burndy contact 12-poles
Max ambient temperature, °C (°F)	45 (113)
Min ambient temperature, °C (°F)	-15 (59)
Max humidity (of air)	95%
Dimensions, LxWxH, mm (in.)	246x235x273 (7x9.25x11)
Weight, kg (lbs)	6.6 (14.5)
Enclosure class	IP23
Standards	EN60974-1, EN60974-10

Process Controller EAC 10

For use with CAN- and Analogue controlled power sources and motors

- Intuitive user interface with real-time heat input keeping you in control of the weld.
- Detachable remote control interface lets you control the system from a comfortable position.
- The automatic weld head detection and setup lets you change between SAW, GMAW and gouging in no time.
- Digital and analogue interface to the power source – works with all current ESAB SAW power sources as well as most analogue power sources on the market including old LAF.
- Closed loop encoder based control system for precise wire feed and travel speed control.

Control cable, 35 m (115 ft.)	0460 910 883
Control cable, 50 m (164 ft.)	0460 910 884
Control cable, 77 m (246 ft.)	0460 910 885
Control cable, 100 m (328 ft.)	0460 910 886

Technical data

Connection voltage from the power source	60V DC or 42V AC, 50/60 Hz
Connection power	max 900 VA
Motor connection adjusted for ESABs motors	Connection of two motors, 6A cont, max 10A
Speed control	Feedback from pulse encoder
Welding speed, m/min (ipm)	0.1-2.0 (4-79) depending on travel carriage
Max. transport speed, m/min (ipm)	2.0 (79)
Consumable wire feed speed, m/min (ipm)	0.3-25.0 (12-984) depending on wire feed unit
Connection to power source	Burndy contact, 12 poles
Inputs	For connection of sensors or limit switches
Max humidity (of air)	95%
Operating temperature, °C (°F)	-10 - +40 (14-104)
Weight complete control unit, kg (lbs.)	6.8 (15)
Weight control pendant, kg (lbs.)	1.25 (2.8)
Dimensions complete control unit LxWxH, mm (in.)	275×300×165 (10.8×11.8×6.5)
Dimensions control pendant LxWxH, mm (in.)	245×225×50 (9.7×8.9×2.0)
Enclosure class	IP23

PAB Fieldbus Interface

For use with ESAB CAN-controlled power sources

- PA universal fieldbus interface offering unlimited control from a PLC, PC or any general control unit.
- Standard HMI.
- Control the welding application from the same communication panel in a multifunctional automation system.
- The dual DC-motor drive unit named FAA is designed for seamless use with the Fieldbus interface.

Technical data

External accessible communication interfaces	Fieldbus (Profibus DIN 19245 Part 1) for welding commands and data
	Ethernet for FTP and Web server

Welding Process quality systems

WeldQAS

Automated welding processes require automated quality checks. The WeldQAS system is an automatic welding process monitor and controls 100% of the production. Parameters are directly monitored during the welding process, enabling an immediate reaction in case of error to avoid consequential damage. WeldQAS can be used to acquire the latest knowledge about welding production, optimisation and cost-effective use in the production processes.

Avoid having to rework or recall your product

WeldQAS uses a 100% checkup of all welded seams by trend analyses and evaluation tools to force reproducible evaluation of the welding parameters. Recognising these changes in welding parameters quickly prevents further production of faulty parts.

Multi-wire setup with PEK and WeldQAS

Power source Aristo® 1000 AC/DC SAW

AC/DC inverter power source for efficient submerged arc welding

- Based on unique and patent pending technologies to deliver the best welding performance with the lowest power consumption.
- Designed for use with the digital PEK controller and the robust A2/A6 feeder units.
- A global inverter - connect to a three phase mains supply from 380 to 575 V, 50 or 60 Hz.
- Change between DC and AC "on the fly". Minimize downtime and weld defects by the push of a button with the patent pending "on the fly" function.
- **CableBoost™** patent-pending technology ensures the performance of the power source is unaffected even when long welding cables are used. What you set is what you get.
- Increase productivity up to 65% compared to DC+ welding by using the higher deposition rate of unbalanced AC with the same heat input.
- **Bead Profile Modelling™** provides adjustable AC settings for precise control of penetration profile and depth, dilution, arc stability and weld appearance to achieve the best productivity and quality for each weld.

Power source Aristo® 1000 AC/DC SAW

Cont.

- **True Square Wave Technology™** delivers the optimum wave form to overcome issues traditionally impacting AC welding. This technology increases process stability compared to conventional AC power sources.
- **SoftStart™** sequence reduces the risk of weld defects. This specially designed start sequence provide improved quality, saves cost and down time by avoiding re-work.
- Critical component protection is provided by a cooling channel design that guards all sensitive power source components from dust and particle contamination, ensuring extended component life.
- Minimal maintenance keeps uptime at a maximum with re-usable air filters that are easily accessed at the front of the machine and cooling channels that are quickly cleaned using compressed air.
- Cable protection ensures there are no production stops because of damaged cables or connectors. All connectors are positioned behind an enclosed door located at the front of the unit for protection and easy access.

DC power sources for submerged-arc welding (SAW) or gas metal arc welding (GMAW)

- Three-phase, fan-cooled DC welding power sources designed for high productivity automated submerged-arc welding (SAW) or high productivity gas metal arc welding (GMAW).
- Used in combination with ESAB's A2-A6 equipment range and the A2-A6 Process Controllers (PEK or PEI).
- Good arc stability at both high and low arc voltages.
- Adjust and monitor the welding parameters on the power source from the front panel of the process controller (PEK or PEI).
- Welding current range can be extended by connecting two power sources in parallel for the most demanding applications.
- Ideal for SAW applications such as wind tower components, nuclear power vessels, boilers and in the ship building industry.
- Ideal for GMAW applications such as welding the root pass in heavy pipe production.

These welding power sources comply with the requirements of EN 60974-1 and IEC 974-1.

S This symbol indicates that the welding power source may be used in areas with an increased electrical hazard, e.g. areas where the electrical hazard is increased due to damp and/or the proximity to earthed metal objects.

Power sources TAF 801 and 1251

Square wave AC power sources for submerged arc welding (SAW)

- Square wave AC power sources that convert the secondary voltage from a sinus wave via a thyristor controlled rectifier bridge to a square wave arc voltage with excellent strike characteristics and good welding properties.
- Capacity for continuous welding
- Pre-setting of arc voltage.
- Reliable square wave striking.
- Arc voltage or current feed back.
- Optimized open circuit voltage.
- Compensation of mains supply fluctuation.
- Voltage drop compensation for long welding cables.
- High power factor ensuring low power consumption.
- Designed and built for convenient servicing.
- Safety control voltage 42V.
- Prepared for Scott connection of two power sources.
- Used in combination with ESAB's A2-A6 equipment range and the A2-A6 Process Controllers (PEK or PEI).

Welding Tractors

Versotrac with process controller EAC 10

Designed to conquer your jobsite

- Modularised system where the tractor can be disassembled into smaller units, carried separately and easily transported.
- Robust wire feed mechanism that can weld mild steel wire up to 5 mm up to 1000A @ 100%.
- The automatic weld head detection and setup lets you change between SAW, GMAW and gouging in no time.
- Intuitive user interface with real-time heat input –keeps you in control of the weld.
- Introducing an all new ergonomic handling system for welding wire spools, making wire changes easy.
- Tool-less interaction makes it easy to change weld point position and switch between butt and fillet welding.
- Re-buildable between three and four wheel versions to suit your needs.

A2 Multitrac with process controller PEK

The universal welding tractor for Submerged-arc Welding (SAW) and Gas Metal Arc Welding (GMAW)

- The A2 Multitrac with the A2/A6 process controller PEK is available for both the SAW and the GMAW method.
- If the SAW-version is chosen, the A2 Multitrac is capable of working equally well with either single or twin wire.
- The feed unit secures an even, stable wire-feed speed.
- Four-wheel drive ensures accurate travel speed.
- Digital control panel allows exact pre-set and control of welding parameters.
- The Multitrac is fully mobile and can easily be moved from one welding station to another. It can also be quickly set-up for different workpieces.
- Designed for use with LAF or TAF welding power sources.

A6 Mastertrac A6TF (SAW)

For efficient Submerged-arc Welding

- Self-propelled, four-wheel drive automatic welding machine.
- Easy to move with quick set-up for different workpieces.
- Suitable for heavy production welding with capacity for up to 6 mm (0.24 inch) wire using 1500A direct or alternating current.
- Designed for use with LAF or TAF welding power sources.
- Three different designs:

Single: available with standard or high speed motor

Twin-Arc: with a simple add-on for the extra wire, you can convert an A6 Single Mastertrac into a highly productive automatic Twin-arc welder for fillet and butt welds without the use of an extra machine or power source.

Tandem: the high deposition rate using a multi-electrode system increases productivity substantially. By selecting different combinations of direct and alternating currents, the A6 Tandem Mastertrac can handle any type of welding work resulting in increased profitability.

- Weld mild steel and aluminium solid or cored wire by modifying an A6 Single Mastertrac with an easy conversion kit for Gas metal arc welding (GMAW).
- Pre-set and control of welding parameters with the A2-A6 Process Controller PEK - a digital control system with display menus; 255 different weld sets can be stored.

A6-DK

The portal welding machine

- Works with a single wire on each head.
- Each weld head is controlled by the A2-A6 PEK process controller and LAF (DC) or TAF (AC) power source.
- Ideal for simultaneous horizontal-vertical welding on both sides of a web or through panel.
- Straddles workpieces up to 800 mm (31 inch) tall and symmetrical profile widths of 400 mm (16 inch).
- Travels directly on a workpiece guided by a joint.
- Travel speed adjustable from 0.15-2.0 m/min (6-79 ipm).
- Store up to 10 l (2.6 gal.) of flux in the hopper.
- Each weld head is equipped with OPC flux recovery system.

ESAB Mechanised GMAW Solutions

Now in separate sales literature

- Key benefits of mechanisation, advanced process solutions, recommended ESAB consumables and standard equipment.
- Updated offering of battery-driven welding tractors and carriages easily mechanise your GMAW process and thermal cutting applications for weaving and non-weaving tasks to meet real-world welding and cutting challenges.
- Innovative features ensure high quality welds and cuts with the highest possible productivity, reliability, repeatability and efficiency.
- Flexible operation with either a battery or external power source.
- All models feature a reliable 4-wheel drive system with rapid acceleration and accurate stepper motor control for constant travel speeds, resulting in more time welding and less downtime.

Welding Heads

A2S Mini Master

A multi-purpose automatic welding system

- Versatile welding system for single wire SAW, twin wire SAW or GMAW.
- Light-weight, compact design allows for greater flexibility.
- Modular design allows user to expand, integrate or modify the system quickly and easily.
- Uses A2-A6 PEK or A2 PEI process controller.
- Accurate, easy joint-tracking with manual or motorized slide system and manual PAV or automatic GMH joint tracking.
- The system attaches to any beam travelling carriage or Column & Boom system.

Ordering information

A6S Arc Master

Flexibility as standard

- Flexibility, reliability and superior performance capability
- Comprehensive component and module system make process customization easy.
- A6 VEC motor for reliable and consistent wire feed.
- Accurate, easy manual PAV or automatic GMH joint tracking with manual slides or joystick-controlled motor-operated cross slides.
- Capable of heavy-duty gas metal arc welding (GMAW), single/twin wire submerged arc welding (SAW), as well as strip cladding and Integrated Cold Electrode (ICE) welding with optional accessories.
- Uses A2-A6 PEK process controller for fast, accurate pre-setting of all parameters before welding starts.
- Feedback system ensures high and consistent welding quality - saves time and material.
- The welding heads can be equipped with a standard wire feed unit (gear ratio 156:1) or with a high-speed wire feed unit (gear ratio 74:1).

A6S and A6DS Tandem welding heads

For optimum productivity

- Suitable for heavy construction welding.
- Capable of welding DC/DC, DC/AC or AC/AC.
- Uses A2-A6 Process Controller PEK for quick and accurate programming of welding parameters for each torch.
- Feedback system gives high and consistent welding quality from start to finish, saving time and money.
- Versatile positioning through easy to use, complete slide assembly for welding torch position, distance stick-out and angle on both leading and trailing torches.
- Enhance productivity by adding optional equipment such as Twin Wire and Integrated Cold Wire systems.
- Available in two basic versions, A6S Tandem Master and A6DS Tandem Master with several configurations to match specific safety, quality and productivity requirements.
- Welding heads can be equipped with a standard wire feed unit (gear ratio 156:1) or with a high-speed wire feed unit (gear ratio 74:1).

A6S and A6DS Tandem welding heads

cont.

A6S Tandem Master

- Optimized for welding across multiple perpendicular axes and is key in the welding of cylindrical objects where both longitudinal and circumferential welding is required.
- Adjustable $+90^\circ$ interval turning bracket and cross slide.
- Automatic joint tracking keeps in track no matter which direction welding occurs.

A6DS Tandem Master

- Optimized for welding in multiple directions and is key in the automated welding of long weld joints such as beams and girders.
- Adjustable $\pm 90^\circ$ interval turning bracket and fixed cross slide.
- Automatic joint tracking in any direction when integrated to ESAB column and boom M-model systems; simply rotate the head 180° and weld in the reverse direction.

A6S Compact welding heads for internal welding

For excellent welding results

- For welding longitudinal and circumferential butt joints inside tubes.
- Three versions available:
 - A6S Compact 300 for internal welding of tubes down to 300 mm (12 inch) inside diameter.
 - A6S Compact 500 for internal welding of tubes down to 500 mm (20 inch) inside diameter.
 - A6S Compact 700 for internal welding of tubes down to 700 mm (27.5 inch) inside diameter.
- Equipped with reliable, VEC feed motor for superior weld performance.
- Supervise and adjust the head position via TV monitoring system - Optional.
- Use standard mini-cross slide assembly and PAV manual tracking system or GMH automatic joint tracking system to easily follow the joint - Optional.
- Add either the FFRS Basic/Super or FFRS 1200/3000 Flux Feed & Recovery System to optimize the welding process.

ICE™

Revolutionary SAW technology for enhanced productivity

- ESAB's patent pending ICE™ technology exploits the excess heat from the Twin SAW process to increase productivity by up to 100% without increasing heat input.
- **Up to 50% higher deposition rate.** Submerged arc welding is already the most productive welding process. But as with any other welding process, the need to limit heat input inhibits productivity. Instead of adding more energy, ICE™ utilises the excess heat available to melt more wire. This boosts productivity by up to 50%, depending on the application.
- **High Deposition Root™** - the ICE™ technology enables the use of tandem welding in root passes, for improved penetration and high productivity and eliminating the need for back gouging. High Deposition Root can increase productivity up to 100% in root welding, depending on the application.
- **Higher welding speed** - the increased deposition rate can also be utilised to increase welding speed. This can significantly improve productivity in applications where welding speed is the key to maximising productivity.
- **Reduced energy consumption** - welding is an energy intensive manufacturing operation. The ICE™ process enables an increase in deposition rate by up to 50%, without adding more energy. This combines environmental benefits with significantly reduced energy consumption.
- **Innovative Flat Cap Control™** - adjusting the ratio of "cold wire" used for cap runs makes it possible to produce a flatter cap to the weld. This increases fatigue resistance and reduces the need for post weld treatment. Just one more boost to your productivity.
- **Reduced flux consumption** - The significant productivity improvement provided by ICE™ enables many applications to be completed with fewer runs. In this way, flux consumption can be reduced by up to 20% when welding with a 50% higher deposition rate.

These results are based on the testing results carried out under controlled conditions by ESAB using ESAB consumables and experienced welding engineers and may vary accordingly.

Suitable application areas

- On- and offshore windtower manufacturing
- Offshore fabrication
- Pipe welding
- General heavy fabrication
- Shipbuilding

HNG Multi

Narrow Gap Welding System

- Designed for both Single (AC or DC) and tandem (DC/AC or AC/AC) wire welding in parallel or almost parallel joints, ranging in width from 18 mm (0.71 in.) and in depth down to 350 mm (13.8 in.).
- Continuous double-sided joint tracking gives a high reliability at shift overlap.
- Continuous measuring of joint width
- Short-circuit protected, welding head - workpiece.
- Automatic positioning.
- Possible to weld up to 50 mm (1.97 in.) joint width
- Air-cooled torch
- Reliable and uniform high weld quality
- High productivity.
- Minimum of supplementary work.

Double-sided joint tracking

A6S SAW strip cladding kit

For surfacing with high alloyed materials

- Used in combination with standard A6S Arc Master welding head.
- Provides an economical solution for surfacing with high alloyed materials such as stainless steel or nickel-based alloys.
- Choose a wider variety of parent materials and consumables.
- Stainless steel cladding is widely used in production of components where additional strength or corrosion resistance is required.
- Welding head can be fitted with electrode strips as wide as 30-100 mm (1.2-4.0 inch) and as thick as 0.5 mm (0.02 inch).

ESW - Electroslag welding

ESW is a method of strip cladding, but differs from SAW strip cladding in that the arc is created between the electrode and the workpiece.

The welding flux that is put into the joint melts and a slag pool is produced, which then increases in depth.

When the temperature of the slag and its conductive capacity thereby increases, the arc is extinguished and the welding current is conducted via the molten slag where the necessary welding energy is produced through resistance.

This method can be used for joining thicknesses of 25 mm (1 in.) and above.

Contact ESAB for Options & Accessories and Technical Data for the ESW Welding Head.

Column & Booms

CaB Systems

Cost efficient and flexible weld mechanization

- Modular design concept allows total customization using standard components.
- Large selection of available components to integrate for a custom solution:
- Any A2 or A6 weld head
- A2-A6 Process Controller PEK with ESAB DC or AC power sources
 - ESAB turning rolls and positioners
 - ESAB flux feeding and recovery systems
 - Monitoring systems and cameras
 - Four basic station configurations, suitable for most standard applications.
- Three different sizes; 300, 460 and 600 (number refers to boom profile height (mm) which determines working range and load capability).
- Choose from stationary or mobile, rail-travelling carriage systems.
- Versatile to respond to any automated welding demand.

Standard CaB sizes

The three different sizes 300, 460 and 600 are the beam height dimensions of the boom in millimeters. Each boom size has a corresponding column. The different sizes are not only limited in where it can fit, but also how far the boom can extend and how much load that can be put on.

Basic Station 1 - Standard format

Conventional Column and boom, with a movable boom and welding head at boom end. Welding equipment can be positioned along four axes.

CaB Systems

Cont.

CaB 300M / 460M / 600M

Modular format - extended functionality

- A modular range of column and booms, available in three load sizes.
- Standard mechanical performance, including cable chains for the boom motions.
- The welding head is mounted at the front end of the boom.
- More than 20 options fully integrated, such as tandem welding, shift function, transport speed etc.
- Due to modularity and the fixed configuration possibilities the lead times for delivery can be kept at a minimum.

Basic Station 1 - Modular and Custom format

Conventional Column and boom, with a movable boom and welding head at boom end. Welding equipment can be positioned along four axes. Cable chains are included.

CaB 300C / 460C / 600C

Custom format - special capabilities

- A customized range of welding column and booms for different customer requirements and applications.
- Loading capacities and working strokes for utmost accessibility to the welding joints.
- Based on the modular CaB range, solutions to meet the most demanding request can be achieved.
- Welding methods as TIG, MIG and SAW cladding as well as Nar row Gap can be chosen on customized stations.

Basic Station 2 - Custom format

Conventional Column and boom, with a movable boom and welding head at boom end combined with a boom-carriage-mounted welding head (not CaB 300).

Basic Station 3 - Custom format

Side-boom manipulator with horizontally fixed boom, supporting one or two welding heads. This welding station, which offers flexible movement, is the basic unit for welding girders and profiles and for joining plates and sections.

Basic Station 4 - Custom format

Side-boom manipulator with double-track boom. Welding heads mounted on either side of the boom. The boom carriages can be individually controlled by the joint tracking systems, on separate tracks. Ideal for transversal double-fillet welding of stiffeners.

CaB Systems

Telbo™ 6500 and Telbo™ 9500

Telescopic boom

- Save valuable workshop space with the unique 3-section telescope-like retraction of the boom, securing operator safety.
- Outstanding reach-out with heavy loading capacity to ensure superior productivity and weld quality.
- Ideal for internal/external circumferential welding of windtower applications.
- Flexible production, no matter if mixed sizes and plate thicknesses are to be welded - productive results are obvious.
- Loaded with 1000 kg (2204 lbs.) Flux BigBag and 1000 kg Wire EcoCoils, welding is continuously performed and costly dwell times are minimized.

Ordering information

For ordering information, please contact nearest ESAB representative.

Features

- PLC control system for synchronized boom motion
- Automatic "Wind Back" of wire during boom retraction
- Telescopic wire guides
- Remote controlled flux nozzle (option)
- Remote controlled height adjustm. of joint tracking sensor (option)
- Saving in factory-floor foot print
- Increased workshop safety
- Enables flexible production
- "Big Pack" handling concepts (option)
- Camera supervision system (option)

Applications

- Power generation, especially wind tower manufacturing lines.
- Pipeline, pipe mill contactors.
- General fabrication (small workshops with limited space).

Gantries

Mechtrac 1730/2100/2500/3000

For mechanised gantry automation

- Fast and flexible way to increase productivity.
- Equipped with A2-A6 PEK process controller and A2 welding equipment for mechanised submerged arc welding (SAW) or gas metal arc welding (GMAW).
- Weld various profiles such as I-, T- or L-beams, straight columns or tapered columns.
- Available in four versions (width of gantry): 1730 mm (68 in.), 2100 mm (83 in.), 2500 mm (94 in.) or 3000 mm (118 in.).
- All versions have standard gantry leg height of 1500 mm (59 in.).
- Floor mounted rail delivered in standard lengths of 3 m (118 in.) - can be easily extended.
- Dual-drive motors are standard.
- Gantry can support a maximum weight of 220 kg (485 lbs.) - up to two A2 welding heads, complete with GMH joint tracking and OPC flux recovery systems.

Mechtrac equipped with A2 welding heads, process controller PEK and power sources LAF 631

Gantrac 300 and 460

Highly stabilized manipulation of welding torches with optimized welding results

- Rigid legs supported by encoder-controlled DC-driven bogie carriages as well as a cross beam to ensure uniform, stable welding speed.
- The gantry beam is equipped with guides and a rack on one or both sides for motorized welding carriages.
- The well-proven A6 welding heads are mounted on heavy duty slides with comprehensive working strokes to obtain good access to the workpieces.
- Incorporates the A2-A6 Process Controller PEK, equipped with GMH automatic joint tracking to control the vertical and horizontal axes.
- Submerged arc welding is the ideal method for the applications intended for this station.
- The flux handling equipment can be operated conveniently, without time-wasting interruptions. At the same time as flux consumption is reduced, the workplace is kept clean and free from flux spillage.
- The welding heads can be turned ± 180 degrees for welding in both X-directions as well as 90 degrees for welding in Y-direction across the beam.
- A large number of positioning axes permit flexible welding production.

Ordering information

For ordering information, please contact your nearest ESAB representative.

Walltrac

Minimal floor working area thanks to the single rail/wall support

- For production of various beam structures, such as I/H and box beams of tapered and non-symmetrical design, stiffener sections and the joining of plates and sections.
- Longitudinal and transverse welding procedures.
- Uses A6 welding heads and A2-A6 Process Controller PEK.
- Automatic joint tracking GMH controls the vertical and horizontal axes, i.e. the slides and the carriages, to safeguard the superior weld quality.
- A large number of positioning axes permit flexible welding production.

Beam Travelling Carriage

To be used with ESAB A2 and A6 welding heads

- Ideal solution for submerged arc welding (SAW) or gas metal arc welding (GMAW) applications requiring beam mounted carriage.
- Can be fitted with any A2 or A6 welding head.
- For longitudinal welding or welding of circumferential workpieces.
- Place the carriage on either a standard I-beam IPE 300 or specially machined I-beam (contact ESAB for details).
- Fast and easy pre-programming of travel motion and welding parameters using the A2-A6 process controller PEK.

Accessory Components

Servo Slide

Motorized slide for linear motion

- Heavy duty capacity with high precision slide for accurate and rapid joint tracking and positioning.
- Can be installed in vertical or horizontal positions - setting lengths up to 1030 mm (41 in.) with a central point of attachment.
- Operates jointly with A2 or A6 components.
- Slides available from 60 mm (2.4 in.) to 1030 mm (41 in.) working range.
- Permissible load of 1500 N (337 lbf/ft.) in any mounting position.
- Maximum torque for vertical unit is 400 Nm (3540 lbf/in.); maximum torque for horizontal unit is 280 Nm (2480 lbf/in.).
- Designed to be used together with joint positioning and tracking systems PAV and GMH.

PAV and GMH

Joint Positioning and Tracking systems

- Simple and easy to use.
- Adapt for use with almost any type of welding joint.
- The PAV system is for manual joint tracking and the GMH system is for automatic joint tracking.
- The PAV and GMH work equally well with ESAB A2 or A6 welding systems.
- Motorized servo slides guarantee a reliable and accurate joint tracking.
- Both the PAV and GMH systems are available in three versions; with control panel on the front, with remote control or without control panel suitable for integration into customized solutions.
- The GMH automatic joint tracking system is designed for use in fillet and butt joints using sensor fingers.
- GMH compensates for irregularities in weld joint, tracks simple geometric shapes and avoids parallax problems.

OPC Basic & Super

Sturdy compact flux recovery systems

- Robust and compact design.
- Easy to operate and practically maintenance-free.
- Integrated system for maximum productivity - lower investment and service costs.
- Adapts to any A2 or A6 welding system - tractor or stationary.
- Uses only compressed air - safe and inexpensive.
- Can be integrated into complete FFRS flux feeding and recovery system.
- Three filter types; filter bag for A2 applications, cyclone filter with filter bag for most A6 applications and Tedak filter for heavy-duty applications.
- OPC system includes; ejector, cyclone, filter with attachment hardware, securing strap, suction hose and four suction nozzles (for butt welds, normal and large; fillet welds, left and right).

OPC Basic Flux Recovery System

- Works on ejector principle using compressed air
- Cyclone separator, on top of flux hopper, efficiently separates dust from recovered flux.
- Slag is separated and flux is returned to hopper.

OPC Super Flux Recovery System

- Similar to Basic System but with stronger ejector and cyclone - provides better suction.
- Can also be used with pre-heated flux.

FFRS Flux Feed and Recovery Systems

Efficient flux handling for cost-effective welding

- Ideal for continuous and high capacity welding
- Minimum manual flux handling.
- Reduced flux consumption for better welding economy.
- Fewer weld stops for increased efficiency.
- Efficient filtration of used air.
- Flux feeds from a 75 l (20 gal.) capacity TPC-75 pressurized flux tank to the ESAB flux hopper of your choice; 6 l or 10 l (1.6 gal. or 2.6 gal.)
- Flux feed inlet options; straight or bent.

FFRS Super

- Built on OPC Super modules
- **Super** - for increased flux and heat conditions.
- Based on ejector vacuum principle.

FFRS 2000 & 3000

- Based upon an electrical suction unit creating vacuum.
- For use when extra high recovery force is required and for compact welding heads.
- Flux dust separated automatically in a pre-separator.

CRE 30 & CRE 60 Air Drying Units

For use with ESAB flux handling systems

- Designed for use with any flux handling system.
- The system is based on the absorption principle - reduces the risk of hydrogen cracking in weld metal by ensuring flux remains dry.
- Built-in monitor - warns if the programmed humidity limit is exceeded.
- Reduces condensation - less corrosion and malfunctions.
- Simple system monitoring - manometer on pressurized dryer bottles with easy-to read dew point indicator.

OCE-2H Cooling unit

Compact and efficient

- Can be used for gas metal arc welding (GMAW) as well as for tungsten arc welding (GTAW).
- Both for manual and automatic welding.
- Flow guard as option.
- Designed for use together with water-cooled welding equipment, manual or automatic.
- The water tank and pump are manufactured of corrosion resistant material. A flow guard is available as optional equipment for control of the water flow down to about 1 l/min (0.26 gal.)

Applications

Welding solutions for Pipemills

Our experience and knowledge - your benefit!

Flexible, reliable welding equipment

A wide range of products developed in-house for various multi-wire SAW applications which are particularly suitable for pipe welding.

Precise, high-speed longitudinal welding

Our concept for longitudinal submerged-arc welding is suitable for pipes in a normal diameter range of 20-64", a normal wall thickness of 6-40 mm (0.24-1.57 in.) and a length of up to 18 m (708.66 in.).

Internal and external welding

For internal welding we have designed pre-stressed booms as well as welding heads for up to four wires.

The external welding station is based on a column and boom solution with a very stable cross-slide to adapt to different pipe diameters.

Return current systems (grounding)

High current circuits have to be closed back to the power source by efficient systems at constantly moving pipes. Flexible steel brushes in two rows in front and behind the welding process are pressed with defined force from outside to the pipe to catch the current with a minimum of voltage loss and to surely avoid any arc blow effect, which would disturb the weld process.

Problem-free flux and wire feed systems

Smooth feeding of wire in different diameters and equally straight-forward supply of new and re-used flux.

The correct combination of compressed air, flux feeding, easy replenishment of new flux via the Big/Bag system, a vacuum unit, a reliable magnetic separator and continuous recovery helps to create welding stations with less downtime, high-quality welds and a cleaner working environment.

Spiral pipe welding

Internal and external welding is performed at one and the same station. Internal welding starts first and, after half a turn, external welding then begins - internally with two or in some cases three wires and externally with one or three wires in the welding process, depending on the diameter and wall thickness of the pipe.

External welding

Windmill Tower Manufacturing

Dedicated solutions for dedicated manufacturers

- The key to efficient production of wind towers is smooth component flow in the workshop. The benefit of a high deposition welding process is completely lost if the set-up or handling of components in any area of the process fails or takes an unacceptable amount of time.
- ESAB can assist with the welding and cutting process in wind tower production and deliver finely tuned solutions for each step in the production process.
- With a complete package from ESAB, you only need to work with one supplier for product, service and support. This results in a large project being organized efficiently, with a fixed cost and agreed time schedule. Smooth production flow is part of the complete delivery.

Oxy-fuel or plasma cutting of plate and seam preparation

Rolling, forming and tack welding of the shell

External longitudinal submerged-arc welding using a column and boom

Internal longitudinal submerged-arc welding using a column and boom

Submerged-arc welding of flanges and supports

Joining of shell sections using roller beds with hydraulic fit-up system. Internal and external submerged-arc welding performed by a column and boom station.

Automatic welding of the door frame.

Production of sub-components using an ESAB positioner and manual welding equipment

Friction Stir Welding

Quality in depth

- The Friction Stir Welding (FSW) method is based on the principle of obtaining a sufficiently high temperature and pressure to join two components together by using a rotating tool, which under high pressure, moves along the joint and thereby creates a weld.
- FSW is ideal for joining profiles and plates
- Butt, lap and corner joints can be welded.

Suitable application areas

The FSW process is capable of welding a large variety of products in diverse industries:

- Aerospace - fuel tanks, fuelage, doors
- Transportation - rail cars
- Marine - deck panels
- Automotive - suspension, bumper, seat parts, battery trays
- Nuclear power - copper canisters
- Heat transfer - heat sinks & exchangers

Key benefits

- Minimal distortion and shrinkage
- No joint preparation - degreasing only
- No grinding, polishing or straightening
- No repair welding
- Reduced weight (40% less than GMAW)
- Consistent weld quality
- Increased tensile strength
- Outstanding fatigue properties
- No fumes, sparks or spatter
- Low noise level
- Improved repeatability

SuperStir™ Friction Stir Welding System

The ESAB SuperStir™ range is purpose-built for high-volume production of large aluminium panels, girders and trusses. The large custom-designed units offer a safe, clean and simple welding process that can be fully automated, dramatically reducing production costs.

ESAB SuperStir™ FSW technology is applied across the entire industrial spectrum, from shipping, offshore, construction and transportation to defence and aerospace.

Friction Stir Welding

Cont.

SuperStir™ FSW Gantry

- A flexible gantry for friction stir welding based upon a modular, five-axis motion system platform that can be scaled to cover a range of applications.
- The SuperStir FSW Gantry system for automated friction stir welding is a modular, 5-axis motion platform in a gantry configuration
- The gantry system is based on ESAB's well proven control system and is designed to fit a broad range of welding applications with a modular architecture that allows it to be tailored to the specific needs of your application.
- The gantry operates on rails making it particularly well suited to weld long components.
- Fully Automated Process. At the heart of ESAB's SuperStir technology is the control system developed for the FSW process.
- For fast support, operation of the gantry can be remotely monitored in real time from any PC computer using a standard Ethernet connection.
- High quality welds - increased tensile strength and outstanding fatigue properties compared to conventional welding.
- Minimum of post treatment - low distortion and shrinkage thanks to low heat input

Options

- FSW heads for different welding thicknesses
- Retractable PIN Tool (RTP) & Bobbin tool head
- Stationary shoulder
- Welding FSW tools
- Joint tracking system
- Weld video monitoring system
- Milling head
- Vacuum system
- Protection bellows for Y and Z range motion components
- Central lubrication system
- Fixture systems

Other combinations of working ranges and welding thicknesses available on request.

Technical data

Basic System

Working range, m			
X axis	up to 150		
Y axis	up to 10		
Z axis	up to 3		
Rotation axis			
A axis	± 6° (around Y axis)		
B axis	± 90° (around X axis)		
Transport speed, m/min	up to 10		
Welding speed, m/min	up to 3		
Welding tool rotation, rpm	100-3000		
Power supply, V	400 ± 10%		
Power consumption, kW	approx. 50		
Welding aluminium thickness (welding tool dependent)	Head 3	Head 4	Head 5
Series 6000, mm	1-10	1-18	1-35
Series 5000 mm	1-7	1-10	1-20
Series 2000 & 7000 mm	1-5	1-8	1-18
Downforce Z axis, kN	25	60	100

Friction Stir Welding

Cont.

LEGIO™ Friction Stir Welding System

- The modular system makes it possible to assemble welding stations to suit the most varied Friction Stir welding applications.
- The LEGIO™ system consists of 5 basic designs in a series of seven sizes, covering a welding depth of 1.2 to 65 mm (0.045 to 2.4 in.)
- These basic types can be supplemented with different types of equipment to suit the most varied production needs with maximum flexibility to any production line.
- The larger S- and the U-models are designed to be easily integrated with larger fixtures, rotary units and exchangeable clamping systems.
- For the production of smaller workpieces, the UT- and the ST-model are the most suitable. They have tables prepared with a hole pattern, where fixtures can be attached.

EWH 50 FSW Friction Stir Welding Head

- This robust, compact and flexible friction stir welding head is designed for welding plates up to 10 mm in aluminium 6000 alloys.
- Due to the compact design it's especially suitable for robotic FSW welding enabling 3D joint geometries.
- Tool holder Weldon 25
- High Accuracy Force sensor (Z-direction)
- Tool cooling system for high volume welding
- Enables conventional FSW and Stationary Shoulder FSW

Technical data

Beam Welding - Pull Through Welders

For welding of beams and profiles

- ESAB offers a complete and effective way of welding beams and profiles. Whether you weld I-, T- or L-beams, wide flange beams, columns, tapered beams or non-symmetrical beams, ESAB has the expertise and welding equipment to match your efficiency, quality, precision, versatility, productivity, and overall welding economy requirements.
- Two types of machines: IT-machines where the beams are welded with the web unit in the vertical position, and I-machines, where the beams are produced in horizontal position.
- High production capacity and perfect weld quality.
- The welding operation takes place when the flange and the web are pressed together under pressure in order completely to eliminate the gap between the surfaces.

Straightening principle:

Beam welder IT-258

Total range of beam sizes that can be welded:

Machine type	Web	Flange
IT-258	200-2500 mm	100-800 mm
IT-158	200-1500 mm	100-800 mm

**Examples of beams
than can be welded:**

Tank welder Circotech

A series of mechanized compact girth welders

Circotech is a series of self-propelled 3 o'clock welding equipment primarily developed for on-site erection of large storage tanks, silos, blast furnaces and similar cylindrical objects. It is available as a single-side version and a double-side version. Usually it is designed to travel on the top edge of the tank shell. As there are different ways of building tanks, one machine in the series is designed to travel on a rail which is temporarily fixed to the shell or on a stand-alone ring outside the shell.

Operator safety - CE approved

The operator of each machine (if a double-side version) rides in a cabin, where he supervises and controls the welding process with the control panel within easy reach. The cabin, whose floor level under the carriage is variable to suit the height of the plate, is built as a cage to give the operator(s) maximum safety and comfort. For weather protection the cage can be covered by curtains. The cabin of a double-side machine is equipped with step ladders and a joining bridge at the top to facilitate for the operators to climb onboard. The bridge also has guard rails for the safety of the operators.

Submerged-arc welding

The machine is usually equipped for SAW with single wire. SAW with twin wires is, upon request, available as an alternative. The flux is supplied from a flux hopper and supported in the welding position by an endless rubber belt from where it may be collected/ sucked up after welding and re-circulated. A flux recovery unit can be included.

Technical data

Height, mm (in.)	1000-3000 (39-118)
Thickness, mm (in.)	8-35 (5/16-1.4)
Min. Shell curvature, radius, mm (in.)	4000 (157)

Economic benefits

The investment in a Circotech installation contributes to a consistent weld quality, which means low defect rate. The consumption of welding consumables is low because of efficient joint preparation. All in all this means good return on investment.

Circotech design

The Circotech is built up of modules to satisfy a variety of customer requirements. The very basic machine can be equipped with a carriage which travels on the top edge of the plates of a tank, or it can be supplied with a carriage made to travel on a separate rail or ring. In this shape the machine can also be controlled by an operator walking along with it on a built-up cat-walk.

However, the machine is usually supplied with a cabin in the form of a safety cage with curtains for protection against rain and wind.

It is easy to adjust the machine for different plate heights, because of the telescopic design of the frame. The design also makes it easy to transport.

For environmental and safety reasons, tanks are nowadays often built with double shells with a space between shells of around 2 m. Circotech is designed to operate also in this space.

Double-side Circotech being lifted onto the job.

Package content

- Ready to weld ESAB subarc welding machine type A6 with manual adjustment slides
- Pre-set control box
- Weather-shielded safety cabin
- ESAB power source LAF 1000
- Flux hopper, 6 l and flux support
- 50 m control cable
- Welding and return cables

A single-side Circotech can be specified for welding either in right-hand or in left-hand direction.

Ordering information

- Single side or double side equipment
- A6 system for SAW with single wire or twin wire
- Top of plate travelling or rail travelling

For ordering information, please contact your nearest ESAB representative.

Options & Accessories

- Preheating and joint-cleaning oxy-acetylene device (complete incl. hoses)
- Lighting equipment
- Extension cables
- Twin-arc kit
- Motorized slide

Close-up of the welding head.

ESAB Retrofit

Bring new life to your equipment

Even old carriers of welding equipment can be revitalised to secure continuous production. ESAB Retrofit is a solution to modernise your SAW equipment for extended life and increased productivity.

We offer standardised packages for welding equipment run by the PEG or the PEH process controller for single or tandem wire set-up. The packages include a choice of power source(s) depending on application and needs, and specialised components for retrofit.

- Increased productivity by upgrading your power source or welding head
- Maintained high integration between controller and CaB motion
- The PEK process controller share the same logic as PEG and PEH
- Same type of wear parts used

Benefits of upgrading from PEG or PEH to the modern PEK process controller

- Access quality data displaying welding parameters from previous welds
- Access production statistics displaying historical deposition rates
- More precise welding values and higher process stability due to encoder feedback with all motors
- Display heat input based on actual welding conditions
- User-friendly interface and menus
- Increased number of weld data settings available
- Quicker software upgrade using USB
- Connectivity to a wider range of automation power sources including Aristo® 1000 AC/DC SAW
- Enables upgrade to ICE™ technology (on request)

Please note: The PEG controller was replaced by PEH in late 1990's. The PEH was made obsolete in 2009 and with the ESAB 10 year spare part supply policy the product will not be supported from 2019.

Tandem setup with PEG

Closeup of ICE wire

Benefits of upgrading your power source

Upgrading from 1000 A to 1250 A

Increased welding current which allows the full utilisation of twin technology. Twin kit is required.

LAF/TAF to Aristo 1000 inverter

Aristo 1000 offers AC/DC capability all in one power source. DC+ to secure penetration in root pass and AC for higher deposition rate in fill pass.

Additional features:

- Parameter and polarity change on the fly. No need to stop welding to change polarity or parameter set-up
- Refine the process and improve deposition rate by adjusting frequency, balance and off-set
- Multi process power source with additional capability for gouging
- Cable boost function ensures stable parameters even with long cables

The kits above contain parts for a standard retrofit. Additional work outside of the kit will be quoted separately.
Other functions and features on request.

We also offer tailored retrofits on various types of SAW stations including other brands than ESAB.

Retrofits using above standard kits do not require re-certification in accordance with EU regulations.

10	Bracket	0379599880

¹Optional item.

UNRIVALED SERVICE AND SUPPORT.

All ESAB products are backed by our commitment to superior customer service and support. Our skilled customer service department is prepared to quickly answer any questions, address problems, and help with the maintenance and upgrading of your machines. And our products are backed with the most comprehensive warranty in the business.

With ESAB, you can be sure you purchased a product that will meet your needs today and in the future. Product and process training is also available. Ask your ESAB sales representative or distributor for a complete ESAB solution.
